

Adding Transitions to Project 1: Volcanoes

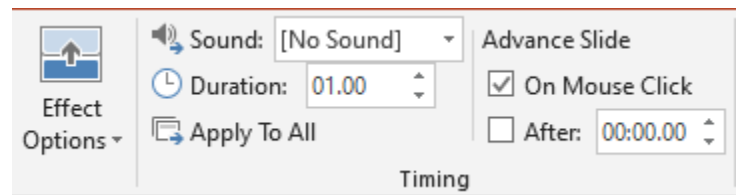

1. **TRANSITIONS** are how objects and text on slides move in. PowerPoint 2019 has 3 types: Subtle, Exciting, and Dynamic Content.

2. Preview transitions and **CHOOSE ONE** for your slidehow.

3. Be sure to look at the **EFFECTS OPTIONS** for your choice.

4. Please **DO NOT** use **SOUND** – these distract and annoy people. Use [No Sound]. **Sounds will drown-out presenter.**

5. You can speed up or slow down the transition with the **DURATION** setting.

6. Leave **ADVANCE SLIDE** ticked **ON MOUSE CLICK**.

7. Preview your transition and when you have what you want, click **APPLY TO ALL**.

8. **PLEASE BE SURE TO SAVE YOUR SLIDESHOW AFTER YOU HAVE CHOSEN AND APPLIED A TRANTION.**

NOTE: You can add transitions to each slide. This takes more time. Most people will find different transitions on different slides distracting. Always remember:

Microsoft makes software that will do many things. Some of the things that PowerPoint will do are not helpful or appreciated with all audiences.

Remember what your purpose is and who you are communicating with.
