

Phone Cameras / Selfies Distort the Face, Making the Face and Nose Look Wider and Longer (tinyurl.com/39fhf8v5)

1. When a photo or video does not show a person's ears as they appear in real life, what does this mean?
2. In image #1, the same face looks very different from the first (85 mm @200 cm) vrs the one on the far right (8 mm @20 cm). How would you describe the difference and what is it caused by?
3. In example three, is the photo on the left (18 mm) or the photo on the right (55 mm) the most natural looking? Why did you make this choice?
4. A new study found that selfies taken from 12" (30 cm) increases nasal/nose size by what percentage? Do you want your nose to appear that much bigger?
5. How far away should the camera be to minimize facial stretching and the distortions this article is about?
